RESIDENTIAL FLOORING

We have transformed many boring concrete floors into spectacular looking surfaces in many homes across Gauteng.

COMMERCIAL FLOORING

Commercial businesses require an appealing and resilient flooring solution to ensure durability. Let's provide you with long-lasting floors.

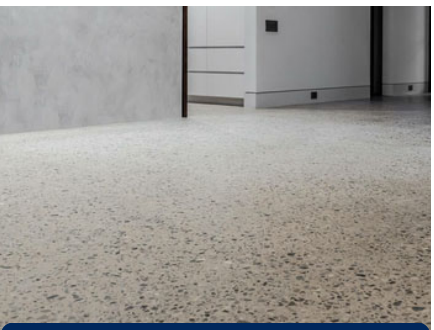

INDUSTRIAL FLOORING

We offer a diverse range of flooring solutions, from epoxy solutions to concrete grounding, to cater to your project needs.

With our extensive experience in carrying out numerous projects within the construction and concrete flooring field, we have utmost certainty in our ability to fulfill our clients' requirements and surpass their expectations.

We take pride in our creativity and strive to deliver a final product that not only meets the highest quality standards but also showcases our innovative mindset in transforming a client's vision into reality. Our aim is to leave a lasting impression of exceptional craftsmanship and inspire others with the quality of our work.

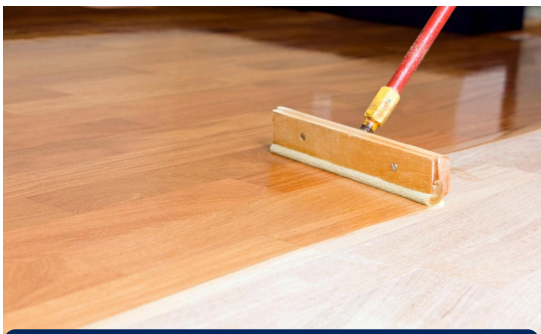

THE PERFECT FLOORING SOLUTION FOR ANY SPACE

EPOXY FLOORING

You can improve the look of new or old concrete floors with epoxy coatings, which provide a sleek, durable finish and easy maintenance. Commonly used in garages and commercial buildings, epoxy coatings are valued for their versatility, durability, low maintenance, and chemical resistance, with various color options available. They consist of a base material and a hardener that react to solidify. A wide selection of concrete coatings is offered.

Polyurethane creates a durable mortar system suitable for heavy foot and vehicle traffic, with thicknesses from 1mm to 12mm. It offers slip resistance, ensuring safety in high-traffic areas, and is ideal for industries like manufacturing, food and beverage, and pharmaceuticals. Its robust nature withstands harsh conditions while being easy to maintain due to its smooth, non-porous surface. Regular cleaning is simple, involving sweeping or mopping. Overall, polyurethane flooring combines durability, functionality, and aesthetic appeal, making it a reliable choice for various environments.

POLYURETHANE FLOORS

POLISHING & GRINDING

If you have an existing concrete slab that needs brightening or require new concrete, we can help create a stunning floor. Our innovative flooring concept enhances concrete's strength and transforms it into a glossy, attractive surface. The polishing and grinding process is straightforward and offers various finish options for striking results.

SAW CUTTING AND JOINT SEALANT

We offer high-quality saw-cutting and joint sealant services for various construction projects. Our skilled team uses advanced tools to deliver outstanding results that meet client needs. We prioritize timely execution to minimize downtime and ensure smooth project timelines, while also providing exceptional customer service and attention to detail.

INDUSTRIAL CONCRETE FLOORING INSTALLATIONS

Industrial concrete flooring is the most widely used concrete flooring solution due to its durability and resistance to abrasion, heavy traffic, and loads. Commonly used for road construction, multi-story car parks, and walkways, industrial concrete flooring can withstand constant pressure. Whether you are looking for an industrial, commercial, or domestic installation, WD Flooring is a specialist provider of both resin and concrete flooring.

SUBFLOOR PREPARATION

Compaction is a crucial step in building a sturdy subfloor, ensuring stability and preventing settlement. Not all soil types compact equally; sandy and gravelly soils are better than clayey or loamy soils. Sometimes, adding crushed stone or sand may be necessary to improve compaction. Proper compaction provides a solid base for flooring, resulting in a level and durable subfloor that lasts.

SUBFLOOR LEVELING

Properly levelling a concrete subfloor is crucial for ensuring the successful installation of various flooring materials. It involves correcting any unevenness, dips, or imperfections in the concrete surface to ensure a smooth and even base for the subsequent flooring installation.
